Dear Sir, Possessing the majority of the type culture collection of Salmonella and the immun sera corresponding them, I should like to attempt some transductions in course of my studies on Enterobacteriaceae.

I should be very obliged to you for sending me the PLT 22 phag stock or the corresponding lysogenic strain of S.typhi murium, as well as an indicator strain too. In literature I found your phag-preparation the most conveniently used throughout the experiments.

Repeating my request, I wait for your reply, and if possible, for your kind lending of the phag preparation and some reprints of your former work on the same subjects.

Thanking you in advance for this courtesies, sincerely yours

Dr.G.K e l e m e n
